

Advantages of using a dehydrator

- Prevent the proliferation of pests
- Reduce the impact of CO2 (fewer waste collection rotations)
- Limit greenhouse gas emissions
- Promote organic recycling to enrich the soil
- Promote the Circular Economy
- Achieve thermo-mechanical dehydration without microorganisms or bacteria

- Reduce the weight/volume of waste by up to 90%
- Decrease the number of containers needed
- Reduce transport costs and the frequency of collections (garbage tax)
- Solve the problem of lack of authorized landfills
- Eliminate the need to refrigerate garbage containers
- Gain space in kitchens

- Increase visibility as an eco-responsible actor
- Contribute to the protection of the environment
- Raise awareness about the recovery of organic waste
- Comply with regulations
- Avoid bad odours
- Improve ergonomics at work (avoid musculoskeletal disorders)
- Work in a cleaner environment
